

# The Future of High Yields: Geringhoff Joins the Revolution of HP Corn®

## Improve Profitability

The day is approaching when growers will consistently average 300 or even 400 bushels per acre. Stine is investing in the research to make high yielding corn with greater per-acre profits a reality. Geringhoff is investing in leading harvest technology to maximize yields.

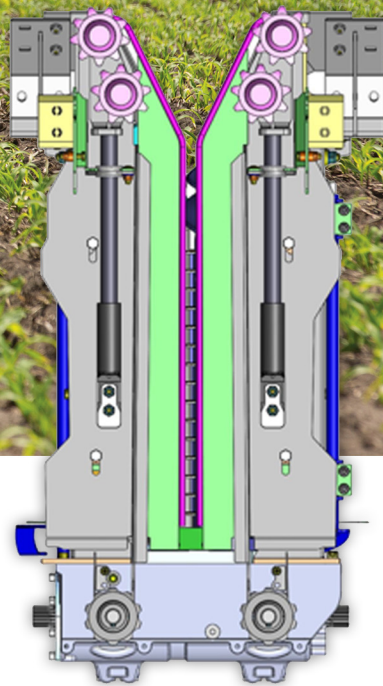

***"I drove this head 100 feet and knew I was tied into a great piece of equipment. It just inhales corn, it's the only head I'll use on our farm."***

- Steve Luther  
Farm Manager at Stine Seed
